

Akash Raj Porika

SOFTWARE ENGINEER

Missouri, USA | rajputporika@gmail.com | +13143280797 | [LinkedIn](#)

Professional Summary:

Software Engineer with 4+ years of experience designing, developing and supporting scalable enterprise applications across wealth management and e-commerce domains. Experienced in building secure digital platforms that support client onboarding, investment management, portfolio servicing, financial workflows, product management, order processing and customer-facing applications. Skilled in translating business requirements into reliable software solutions by developing backend services, modern web applications, data-driven workflows and integrations with internal and external systems. Experienced in designing high-performance applications, optimizing database operations, implementing secure access controls and delivering production-ready solutions through automated testing, deployment, monitoring and cloud-based environments. Hands-on experience working in Agile teams, collaborating with cross-functional stakeholders, improving application performance, integrating intelligent AI-driven capabilities and supporting enterprise platforms with strong focus on scalability, security, compliance and user experience.

Technical Skills:

Programming Languages:	Java, SQL, JavaScript, TypeScript, HTML5, CSS3
Backend Technologies:	Spring Boot, Spring MVC, Spring Core, Spring Security, Spring Data JPA, Hibernate, RESTful APIs, Microservices Architecture
Frontend Technologies:	Angular, React.js, Bootstrap, Material UI, jQuery, AJAX, JSON
Databases:	Oracle, MySQL, PostgreSQL, SQL Server, MongoDB, Redis
Cloud Platforms:	AWS (EC2, S3, RDS, Lambda, ECS, EKS, IAM, CloudWatch), Microsoft Azure
DevOps & CI/CD:	Git, GitHub, GitLab, Jenkins, Docker, Kubernetes, Helm, Terraform, Ansible
Big Data & Messaging:	Apache Spark, Hadoop, Apache Kafka, RabbitMQ, SOAP Web Services
Testing & Quality Assurance:	JUnit, Mockito, Postman, SonarQube, Selenium
Security & Compliance:	OAuth 2.0, JWT, RBAC, PCI-DSS, SOX, GDPR, SOC 2, NIST, ISO 27001, OWASP Top 10
Monitoring & Logging:	Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana
Development Tools:	IntelliJ IDEA, Eclipse, VS Code, Maven, Gradle, Jira, Confluence
Methodologies:	Agile Scrum, Waterfall, SDLC, TDD, CI/CD, Design Patterns, Object-Oriented Programming (OOP)
Operating Systems:	Linux, Unix, Windows

Professional Experience:

Edward Jones – MO | Software Engineer

Jun 2024 – Current

- Worked closely with wealth advisors, product owners and business teams to understand business needs and translate them into digital solutions supporting client onboarding, portfolio management, investment planning, account servicing and advisor operations.
- Designed and built backend services using Java, Spring Boot and REST APIs to manage client information, investment accounts, portfolio data, transactions and financial planning workflows while integrating with internal banking systems and external financial platforms.
- Developed user-friendly web applications using Angular, TypeScript to provide clients and advisors with dashboards, portfolio insights, account management features and investment tracking capabilities.
- Implemented key wealth management workflows such as client risk profiling, portfolio allocation, investment transactions, performance monitoring and financial recommendations to improve advisor productivity and enhance client experiences.
- Worked on database design and optimization using Oracle, SQL and Hibernate/JPA to efficiently manage large volumes of financial data, transaction records, reporting needs and portfolio calculations, improving query performance by 40%.
- Implemented application security using Spring Security, OAuth 2.0, JWT and RBAC to ensure secure access, protect sensitive investment information and support financial compliance requirements.
- Integrated AI capabilities using LLMs, Generative AI and RAG workflows to provide intelligent document search, advisor assistance, knowledge retrieval and automated financial insights, reducing manual research efforts by 30%.
- Performed application testing using JUnit, Selenium and Postman to validate backend services, APIs and user workflows while ensuring application stability across development and production environments.
- Supported continuous delivery by creating automated CI/CD pipelines using Jenkins, Docker and Kubernetes for streamlined builds, testing, deployments and reliable application releases.

- Supported cloud deployment and production operations on AWS (EC2, RDS, CloudWatch) by monitoring application health, troubleshooting issues and ensuring compliance with SOX, PCI-DSS, encryption standards, audit controls and secure SDLC practices.

Cognizant – India | Software Engineer

Jun 2021 – Aug 2023

- Designed and developed scalable microservices-based e-commerce applications using Java, Spring Boot, JPA and Hibernate supporting product catalog, cart, checkout, payment, inventory and order management workflows.
- Built secure and high-performance RESTful APIs to integrate frontend applications, backend services, payment gateways, inventory platforms and third-party logistics systems for seamless transaction processing.
- Developed responsive web applications using Angular, HTML5 and CSS3 with reusable components, reactive forms, product search, checkout and order tracking features to improve customer experience.
- Designed and optimized database solutions using Oracle, PostgreSQL and SQL Server, implementing SQL tuning, indexing and query optimization to support high-volume e-commerce transactions.
- Implemented event-driven architecture using Apache Kafka and Redis for real-time order processing, inventory synchronization and improved application performance through efficient caching strategies.
- Enhanced application security using Spring Security, OAuth2 and JWT authentication, implementing access controls, encryption and PCI-DSS-aligned practices to protect customer and payment data.
- Integrated AI-powered capabilities such as personalized recommendations, intelligent product search and customer support automation through API-based AI service integrations.
- Developed comprehensive testing solutions using JUnit, Mockito while performing unit, integration, API, regression and performance testing to ensure application quality.
- Automated build, deployment and release processes using Jenkins, Docker and Azure Kubernetes Service (AKS) with Git-based source control and CI/CD workflows.
- Monitored applications on Microsoft Azure using Azure Monitor, Application Insights and Log Analytics for performance monitoring, troubleshooting and production support in Agile/Scrum environments.
- Optimized backend services, API performance and database operations, reducing average API response time by 25% and improving system reliability for high-volume order processing.

Education:

Master of Science in Information Technology Management– Webster University, St. Louis, **MO, USA**

Bachelor of Technology in Computer Science Engineering - Guru Nanak Institute of Technology, **Hyderabad, India**
